DustyPaws

Tech Used: Figma, React.js, Node.js, MongoDB as database, Express.js, HTML5, CSS3, Git

Our team wants to create a platform which intends to connect NGO's, local stores and individuals. In the platform, a common person can upload the image and location of the animal which needs care. To prioritise the situation, we will create a priority check for them the request raised by the individual. Therefore, NGOs can reach animals which require immediate help. In order to raise the awareness and to tempt the people NGO will reward them each animal they helped them save. Not only, they get discounts from the local store through which the local store makes profit and increases their popularity but also, the more the person helps the NGO will reward them in different ways such as a lucky draw or some contest they organise weekly.

Hello,

Regarding the **Junior Full Stack Dev**, please find attached copy of my resume and Github link in that. You can also visit my LinkedIn to know more about and Skills, assessment tests passed and online certifications.

Although I am a MERN stack developer, my area of expertise about which I feel more confident is front-end development. Currently, I am a student at Langara college in the program of PPD Web and Mobile application development program; and I am in my last term. I have knowledge in React.js, Express.js, Node.js, MongoDB and Tailwind CSS. Apart from that I have worked in Wordpress, Sass, and advance Css. I also have bachelor's in computer science done in 2019.

If you would like to get in touch to discuss my application and arrange an interview, you can contact me at +1 778 317 3463 or at jaskaran2k15@gmail.com.

I'm looking forward to hearing from you soon.

Thanks,

Jaskaranvir Deogan
